Height: 30 feet

Spread: 25 feet

Sunlight: ○

Hardiness Zone: 3b

Other Names: Ussurian Pear

Description:

A hardy pear tree, with clouds of showy white flowers in spring, good fall color and consistent oval shape; good size yellow fruit, good quality, excellent for canning; fallen fruit can be messy, very resistant to fireblight

Edible Qualities

Patten Pear is a medium-sized tree that is typically grown for its edible qualities. It produces yellow oblong pears (which are botanically known as 'pomes') with a red blush and white flesh which are usually ready for picking in early fall. The pears have a sweet taste and a juicy texture.

The pears are most often used in the following ways:

- Fresh Eating
- Cooking
- Baking
- Juice-Making

Features & Attributes

Patten Pear is bathed in stunning clusters of white flowers with purple anthers along the branches in mid spring. It has dark green deciduous foliage. The glossy oval leaves turn an outstanding burgundy in the fall. The fruits are showy yellow pears with a red blush, which are carried in abundance in early fall. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a dense deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy

Aside from its primary use as an edible, Patten Pear is sutiable for the following landscape applications;

- Accent
- Shade
- Orchard/Edible Landscaping

Planting & Growing

Patten Pear will grow to be about 30 feet tall at maturity, with a spread of 25 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and should not be planted underneath power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 70 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
